

Index correlates plates and text for *Coinage in the Greek World* by Carradice and Price

by Warren W. Esty

Coinage in the Greek World by Ian Carradice and Martin Price of the British Museum Coin Room staff is an

outstanding introduction to ancient Greek coinage. It won the Royal Numismatic Society's 1989 Lhotka Prize for the book "most helpful to the elementary student

of numismatics." But, far from being only an introduction, it is interesting and useful for advanced students as well, because it incorporates the latest research into an authoritative work on all aspects of Greek coinage, including its introduction, development, production, design and use. It covers the time period from the inception of coinage through the Hellenistic period. *Roman Provincial Coinage*, by Kevin Butcher, another volume in the same Seaby series, discusses Greek coinage under the Roman Empire.

The book is well illustrated with excellent photographs of both sides of 302 coins. The index to the plates identifies the coins, but does not cite the pages on which the coins are discussed. The following index provides those citations. It is suitable for photocopying and will fit nicely inside the back cover of the book. Some of the photographed coins are not specifically cited in the text — page references for such coins are to the most appropriate pages and are distinguished with asterisks (*).

| Coin | Pages | Coin | Pages | Coin | Pages | Coin | Pages | Coin | Pages |
|------|------------|------|--------------|------|----------------|------|-----------------------|------|------------------|
| 1 | 24, 89 | 63 | 44 | 125 | 76 | 186 | 106, 114 | 246 | 130 |
